

FREE HEARING SCREENINGS!

Early identification of hearing loss is important to a successful future!

Our mission in this project is simple- identify! Our quick and fun screenings will help determine if a child may have hearing loss. We utilize both OAE and Audiometer machines. The OAE machine *is not* response-based and is typically used for children from ages 0-3. The Audiometer machine *is* response-based and is used for children ages 4 and up. Both screening procedures are quick, interactive and fun for the children! Each child gets a cool sticker and a high-five, regardless of their willingness to participate. :)

Sertoma Speech & Hearing Foundation: Fun Facts

We have been serving our community for nearly 35 years!

We have been screening children for hearing loss for 18 years in the Pasco County School System!

All staff members are registered, thoroughly screened, Contractors with Florida Public Schools!

We love what we do!
